PACE4B MIGHT BE SECRETED.

-!- ALTERNATIVE PRODUCTS: 8 ISOFORMS; PACE4A-I/PACE4 (SHOWN HERE),
PACE4A-II, PACE4B/PACE41, PACE4C, PACE4CS, PACE4D, PACE4E-I AND
PACE4A-II, PACE4B/PACE41, PACE4B/PACE4CS, PACE4D, PACE4E-I AND
PACE4E-II; ARE PRODUCED BY ALTERNATIVE SPLICING. ISOFORMS PACE4B,
C, CS AND D MIGHT BE ENZYMATICALLY INACTIVE.
-!- TISSUE SPECIFICITY: EACH PACE4 ISOFORM EXHIBITS A UNIQUE
RESTRICTED DISTRIBUTION. PACE4A-I IS EXPRESSED IN HEART, BRAIN,
PLACENTA, LUNG, SKELETAL MUSCLE, KIDNEY, PANOREAS, BUT AT
COMPARATIVELY HIGHER LEVELS IN THE LIVER. PACE4A-II IS AT LEAST
EXPRESSED IN PLACENTA, PACE4B WAS ONLY FOUND IN THE EMBRYONIC
KIDNEY CELL LINE FROM WHICH IT WAS ISOLATED. PACE4C AND PACE4D ARE
EXPRESSED IN PLACENTA. PACE4E-I IS EXPRESSED IN CERRBELLUM,
PLACENTA AND PITUITARY. PACE4E-II IS AT LEAST PRESENT IN
                                            MEDLINE=97335942; PubMed=9192737;

PHYLOGENET. EVOL. 15:157-164(2000).

-I-FUNCTION: COMPONENT OF THE UBIQUINOL-CYTOCHROME C REDUCTASE
COMPLEX (COMPLEX III OR CYTOCHROME B-C1 COMPLEX), WHICH IS A
RESPIRATORY CHAIN THAT GENERATES AN ELECTROCHEMICAL POTENTIAL
COUPLED TO ATP SYNTHESIS (BY SIMILARITY).

-I-COPACTOR: TWO HEME GROUPS (B562 AND B566) WHICH ARE NOT COVALENTLY
BOUND TO THE PROTEIN (BY SIMILARITY).

-I-SUBUNIT: THE MAIN SUBUNITS OF COMPLEX B-C1 ARE: CYTOCHROME B,
CYTOCHROME C1 AND THE RIESKE PROTEIN (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    InterPro; IPR000179; Cyt.b.b6.

Nature 409:1007-1011(2001).

-! FUNCTION: FURNISHES A MEANS FOR FORMATION OF CORRECTLY CHARGED GLU-TRNA(GLN) THROUGH THE TRANSAMIDATION OF MISACYLATED GLU-TRNA(GLN) IN ORGANISMS WHICH LACK GLUTAMINIL-TRNA SYNTHETASE. THE REACTION TAKES PLACE IN THE PRESENCE OF GLUTAMINE AND ATP THROUGH AND ACTIVATED GAMMA-PHOSPHO-GLU-TRNA(GLN) (BY SIMILARITY).

-! CATALYTIC ACTIVITY: ATP + L-GLUTAMYL-TRNA(GLN) + L-GLUTAMINE = ADP + PHOSPHATE + L-GLUTAMINL-TRNA(GLN) + L-GLUTAMATE.

-! SUBUNIT: HETEROTRIMER OF A, B AND C SUBUNITS (BY SIMILARITY).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Submitted (APR-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Receptor for Wnt proteins. Most of frizzled receptors are coupled to the beta-catenin canonical signaling pathway, which leads to the activation of dishvelled proteins, inhibition of GSK-3 kinase, nuclear accumulation of beta-catenin and activation of

Wnt target genes. A second signaling pathway involving PKC and calcium fluxes has been seen for some family members, but it is not yet clear if it represents a distinct pathway or if it can be integrated in the canonical pathway, as PKC seems to be required for Mnt-mediated inactivation of GSK-3 kinase. Both pathways seem to involve interactions with G-proteins. May be involved in transduction and intercellular transmission of polarity information during tissue morphogenesis and/or in differentiated
                                                                                                                                                                                                      --- DOMAIN: Lys-Thr-X-X-X-Trp motif is involved in the activation of the Wnt/Deta-catenin signaling pathway (By similarity).
---- DOMAIN: The fz domain is involved in binding with Wnt ligands (by
                                                                                                                                               -i-SUBCELLULAR LOCATION: Integral membrane protein.
-i-TISSUE SPECIFICITY: Most abundant in fetal kidney, followed by brain and lung. In adult tissues, expressed in kidney, heart,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              N-LINKED (GLCNAC. .)
